

# DudeWorks™ Inventory Manager

Asset inventory configuration management for System Center Configuration Manager 2007

**Inventory Manager** provides the ability to custom tailor SCCM inventory to suit the needs of your company and remove the complexities of editing configuration and reporting MOF files by means of an intuitive and easy to use graphical user interface (GUI).

Replaces the manual, text based process with a front end editor that provides a GUI to allow the user to easily add, edit and remove inventory items from SCCM. Provides a rule based management solution with intuitive easy to use wizards that take all the guess work out of inventory configuration and speeds the process of managing asset inventory in SCCM to a few minutes rather than several hours or possibly days.

**Integrated Console GUI.** See your inventory rule status and configuration with the built in integrated MMC snap-in add-on to the SCCM 2007 console.

**Inventory Registry Keys.** Extend asset data with registry key data from client systems.

**Inventory WMI Classes.** Extend asset data from WMI class data from client systems.

**Import Custom Rules.** The ability to import predefined custom inventory rules (MOF), makes Inventory Manager almost limitless in its ability to extend inventory reporting.

**No Programming Required.** Use intuitive interface and wizards to create and manage inventory rules that automatically handle all MOF file editing.

**Instant Inventory Configuration Management.** Instantly extend asset inventory with granular control over all asset properties configuration and reporting.

**Huge time and cost savings.** Extend Inventory Rules in seconds not hours or days. Reduce change risk substantially. Simple to use with very little to zero training, start using immediately.

**Fine tune your asset data.** Helps save database space by allowing granular reporting control over all asset properties

## Key Features

- Easy granular management of hardware inventory
- Intuitive easy to use wizards
- Inventory Registry Keys and WMI Classes
- Built-in registry key selector wizard
- Built-in WMI browser class selector wizard
- Edit inventory reporting properties
- Add new inventory reporting rules
- Delete and restore inventory rules
- Sync inventory rules to child sites
- Import MOF files
- WMI class and property descriptions displayed
- Manages sms\_def.mof and configuration.mof files
- Integrated into management console

## Systems Management Integration

- Supports Configuration Manager 2007
- Supports Systems Management Server 2003

## System Requirements

- Windows Server 2008 / 2003 / x86 / x64
- Windows 7 / XP / Vista / x86 / x64
